

FRAP

Suspension Parts

FRAP is an Italian company highly specialized in the design, development and manufacturing of ball joints, steering heads, rods and other components for steering and suspension. The components of safety for all vehicles steered a workspace is now increasingly competitive and specialized. The quality, range, service and competitiveness are the strengths that the FRAP used to overcome the challenges of the global market, designing and producing the second highest standard of quality, with a constant technical updating and in full compliance with all regulations : the major manufacturers of tractors and trucks as New Holland, Same Deutz-Fahr Group and Iveco have chosen as hubs FRAP equipment original equipment.

Wishbones

Frap wishbones have an internal spring that absorbs shock and vibration movements easier and safer, a

Ball joints and engineering features of

all joints provide the performance and durability necessary

Steering knuckle has a patented design of the protective plate that locks the mixer between the upper and lower ball joints, preventing the ball joints from separating, and the plate is made of high-strength steel, which can effectively prevent the ball joints from being damaged by the road debris.
